Chronic underinvestment in HRH has jeopardized country efforts to achieve HIV epidemic control and other critical health goals

Development partners have stepped in to support thousands of health and social workers, across a number of countries

Inventorying the Donor-Supported Health Workforce

Cote d'Ivoire medical facility. Credit: Gildas Gbacada

Development partners and host governments need better tools to understand the scope and nature of staffing investments, in order:

- To optimize health worker utilization for advancing epidemic control, and
- To inform sustainability planning for when epidemic control is achieved

HRH2030 has developed the **HRH Inventory Tool** to assist countries to inventory and analyze donor-investments in the health workforce

What is the HRH Inventory Tool?

The HRH Inventory Tool includes information on:

- Who is supported?
- Where are they deployed?
- How much are they paid?
- What benefits do they receive?
- Why were they hired?
- What technical areas are covered?
- How well does their compensation align with government salaries?

What is the activity purpose?

Countries might conduct an HRH Inventory in order to:

- More easily track and analyze donor investments in the health workforce, down to site-level
- Fulfill either donor or host government reporting requirements
- Facilitate stronger coordination and planning among donors, governments and implementers
- Link investments to results and more robust sector-wide performance monitoring
- Assess alignment to host government establishment lists and pay bands
- Use an evidence-based tool to negotiate sustainability plans to maintain progress

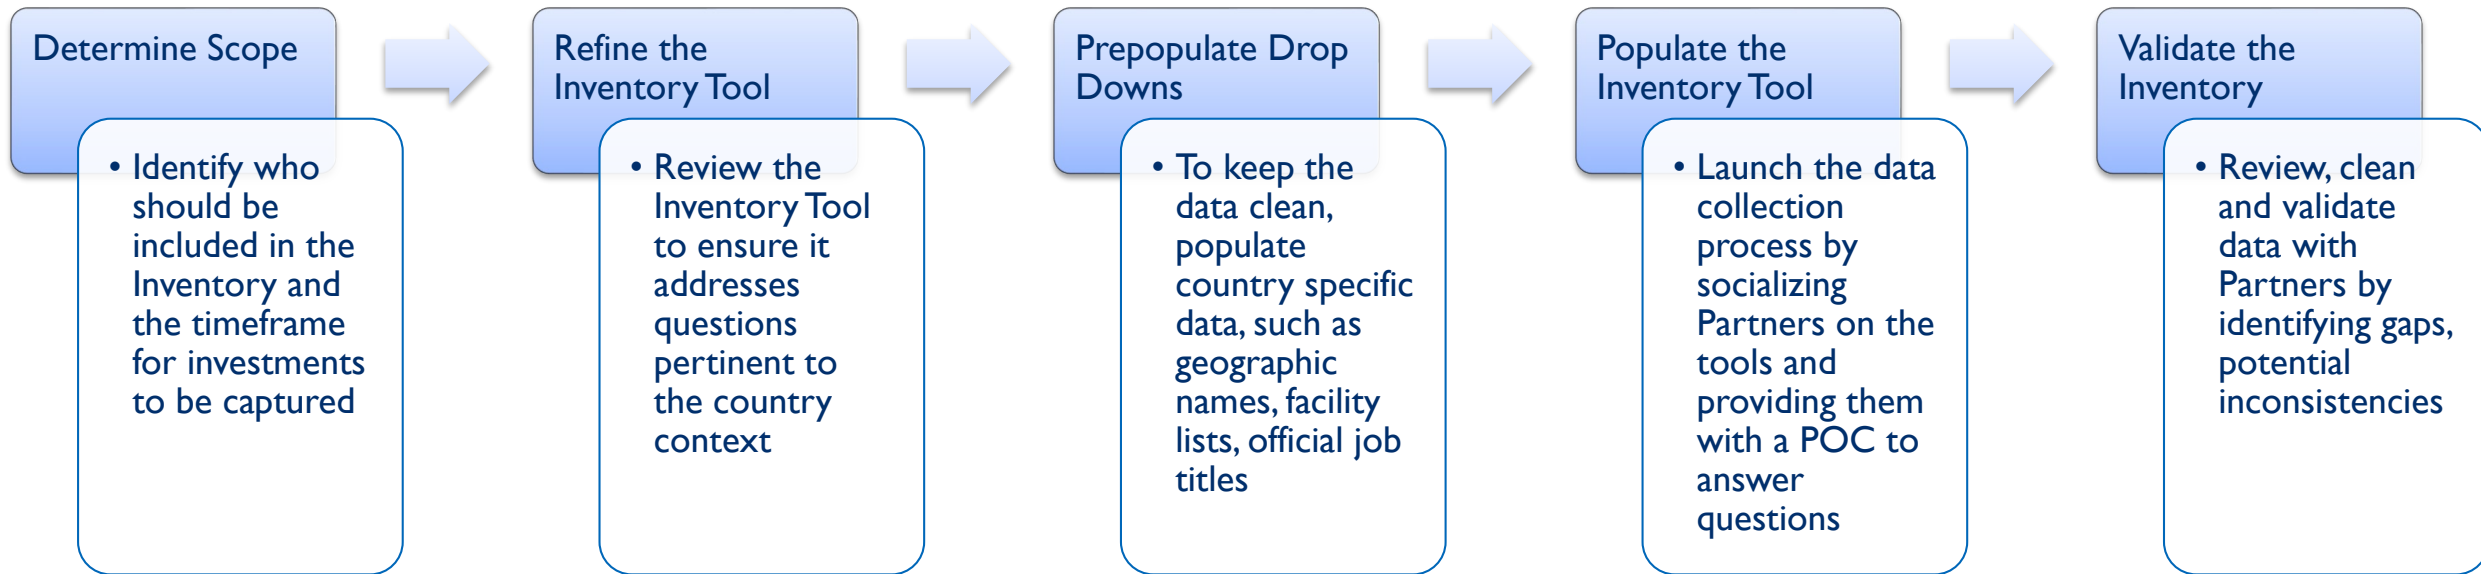

What are the lessons learned from other countries?

Conducted inventories in Tanzania, Lesotho, Eswatini, Namibia and Philippines:

- Involved major donors, including PEPFAR and GFATM, and others
- National government awareness of donor investments in health were low, especially of lay cadres
- Inventories have led to increased donor coordination and government engagement on planning
- Findings often demonstrated strong alignment with government schemes of service/pay bands
- Inventory aids in developing a stepwise, diversified approach to sustainability

 What gets measured, gets managed

A recap of the HRH Inventory Tool Categories

General Information

- Funding Entity, Project Name, Prime Implementing Partner, Sub-Implementing Partner, Site Level, Region, District, Facility, Type, and Ownership

General HCW Information

- Job Title, Govt Equivalent Job Title, Cadre Type, Technical Area, Hiring Reason, Gender, Position, Avg FTE Per Week

Salaried Workers

- Annual Base Salary, Statutory Benefits, Overtime, Other Financial Benefits

Stipend Workers

- Annual Stipend & Description

Additional Information

- Other Non-Financial Benefits, Professional Development, Any Additional Comments

The HRH Inventory Dashboard

Eswatini HRH Sustainability Planning Dashboard - FY2018 - Version 1.4 (12 February 2019)

BACKGROUND: To better understand the scope and nature of Donors' HRH investments in Eswatini, HRH2030 compiled FY18 data on health workers supported by the United States Government through PEPFAR, the Global Fund, and MSF into the HRH Inventory. The HRH Inventory includes support to health workers that played a critical role in supporting the Government's HIV epidemic control efforts, and therefore, reflects HRH investments that would need to be absorbed locally, if donors were to withdraw their support. Project staff that either coordinate or oversee donor activities or provide capacity building or technical assistance to the Government and local partners were *not* included. The HRH Inventory provides a wealth of information about Donors' investments in HRH, including job titles of health workers supported, name of facilities where health workers are based, and detailed information on compensation. It also includes a mapping of Donor-supported workers to Government of the Kingdom of Eswatini cadre and pay bands, where available, to determine if these HRH investments are well positioned for local transition. To support analysis of the HRH Inventory, HRH2030 developed this user-friendly dashboard.

Tab	Description
Tab 1 - What kind of HRH support is provided?	An analysis of the kinds of HRH support Donors provide.
Tab 2 - Who receives support?	An analysis of which types of health workers receiving Donor support, the number of health workers supported by cadre, the average salary or stipend that cadre receives, and the total amount of support provided.
Tab 3 - Where are they located?	An analysis of where health workers receiving Donor support are located, by site level, facility type, and facility ownership.
Tab 4 - What type of facilities?	An analysis of where health workers receiving Donor support are located, by site level, facility type, and facility ownership.
Tab 5 - Who funds them?	An analysis of which funding entities provide support.
Tab 6 - Are they aligned?	An analysis of pay compared to official GKoE pay bands.
Tab 7 - HRH Mortgage	The HRH Mortgage is a "back of the envelope" valuation of the potential transition costs for the partner country to absorb HRH investments. It allows the Government and Donors to model different planning scenarios and cost estimates that can be compared to country plans, priorities and budgets.
The remaining tabs pertain to the HRH Inventory.	
HRH Data	Full Data Set of HCWs paid salary or stipend
Hourly-Daily Data	Data Set for Hourly or ad locum workers
Facility List	List of health facilities, type, ownership, designation, and location
GKoE Cadre List	List of official GKoE positions and pay bands
Options List	Lists pertaining to options for estimated mortgage, including priority cadres.

HRH Mortgage Estimate and Transition Scenarios

HRH MORTGAGE

Background: The HRH Mortgage is a “back of the envelope” valuation of the potential transition costs for the partner country to absorb HRH investments. It allows the Government and Donors to model different planning scenarios and cost estimates that can be compared to country plans, priorities and budgets. Rather than assume the costs borne by partners, where possible, the MoHSS Establishment Lists and pay scales are used. If a Donor-supported position could be mapped to an equivalent position in the Government’s establishment list, the entry level is used as the base salary.

By Role

By Role

By Location
