Utilizing Health Workforce Training Data for Decision Making
Case Study Instructions

- **Day 1**

    o Begin by summarizing your mission so that all group members understand what your case is trying to achieve.

    o As part of engaging IPs in achieving the mission, identify the health workforce challenges that will be addressed during the training.

    o Identify data needs to develop and monitor the implementation plan.

    o Review the data set provided and document any data quality issues. Make recommendations to improve the quality of the data.

    o Determine the stakeholders, both local and international, that will need to be engaged to achieve this mission.

    o Map the information use flows for these stakeholders based on how these stakeholders need to use the data achieve this mission.

- **Day 2**

    o Using the provided guide, conduct basic analysis using your data set.

    o Based on the stakeholders identified in Day 1, identify the potential barriers to use of data that could affect your ability to achieve the mission. Complete the table.

    o Recommend feedback loops in relation to your mission.

- **Day 3**

    o Complete the Link Data to Action Framework to demonstrate what is needed to achieve your mission.

    o Create a summary recommendation on how you will achieve your mission.

    o Present your findings to the group.
